

Alice Yu

Alice Yu is almost like our team leader when we first formed the group. She's the one who make sure we make stay on task with our work, and will be willing to ask all the questions we need to ask from our TA or professor. It was great how well she organized us, and guiding us through what our project is going to be after we realized how hard the other project we thought we were going to do. The only criticisms I have for her, is that slow down with what we're doing and notify the whole group members what we're doing. There were times when we were doing something important for the group project, but I didn't realize it until later on.

Great performance! She was very helpful and organized during the planning meeting.

Alice did a great job getting the team together. She also took responsibility for setting up our Git repository and helped us pick a project.

Alice was quick to help organize a room to discuss team name. Alice is always on top of contacting people before meetings. Alice was also on top of the assignments and had an objective or list of things to do for each meeting that we had. She also thought ahead. Improve: Alice should wait until a group member has finished talking before speaking.

Alice takes charge in meetings and helps lead the group into the subjects that need to be discussed during the meeting. Alice makes sure that the group has done all of the deliverables that need to be done and parts of the future ones we can do.

Alice was a clear and concise leader in the setting up of the team and the project. Alice was also very good about arranging times and letting people know the times for which to meet.

Alice should try to calm down during meetings and learn to take a back seat during some discussions.

Brighton Keslin

Brighton Keslin is like our main tech person. He knows what we need in our project. When we were going through our project, and see how we implement things, he was always catching what we were missing. For example when we were trying to think of a way to Search things through our website, he informed us that we needed a server. Eventually, he basically guided us through what we were the bare minimums of the project, in order for it to be up and running. However, he can be a little harsh when he says things though.

Brighton is bringing a lot of important knowledge for our project to the group. He doesn't seem at all condescending or unwilling to teach the rest of us, which is great.

Like: Brighton took time to explain and discuss questions that we had as a group. Brighton was willing to help us with setting up Github.

Brighton, with his knowledge with creating UI, is leading the group working on the UI

Great performance. He contributed information about servers and was creative during the planning meeting.

Carol Figueroa

Carol Figueroa is a person who is willing to do any part of the project when we tell her to do so. She will do it in a timely fashion as well. When we came up with an idea, she was order to email the librarian, and she did within a couple of minutes. Another example is when Alice told her to log into Github to try out something, she tried her best to get the work done. Sadly, there was some compensation with her Github account. Nevertheless, we kind of need that kind of person in our team. A person who gets whatever we need to be accomplished done. I do have to say that she needs to voice her opinion more. She always seemed to get talk over when we in the heat of discussion.

Great performance. She was attentive and creative during the planning meeting

Carol was very clear with her ideas and was very productive during the planning meeting.

Carol should to speak up more during meetings, as she provides valuable input to the discussion.

Carol has a really positive energy and seems eager to learn.

Carol had some great ideas for the program during the story card session.

Christopher Peck

Christopher Peck is a calm person I can relate to. He's a chilled guy, who will get his work done, and come up with ideas. He may be a bit quiet during our conversation, but he will make sure he is heard. By the way our conversation has been going, he seems to know his materials and can help out a lot on the technical side. He's like a combination of Carol, and Brighton actually, but without any of their cons. I can't really say he has any bad part of him, so basically all good things about him.

Christopher is great at participating in discussions. He contributes ideas when they are needed and doesn't interrupt or talk over people.

Great performance. He was very helpful and organized during the planning meeting.

Chris was able to tell the group that only one person should speak at a time when the group had too many overlapping conversations. Chris offered to help with the User interface as he has some experience with it.

Chris was very honest about how long he felt different elements of the project would take and was able to explain them in such a manner that he was able to constructively shape the team's priorities.

Christopher should be more present, he needs to be more attentive and involved within the meetings.

Timothy Ma

Tim has relevant experience to the project. He seems knowledgeable about what we need to do.

Timothy was extremely constructive during the planning meeting giving clear and concise reasoning behind what we needed and how it would have to be done.

Like: Tim offered to help build and teach us how to build the database that will be used for our project. Improve: Tim should inform the team if he will be a few minutes late to the Scrum meeting.

Timothy had knowledge in database so he took charge of group working on the database.

Timothy should attempt to take more control of the conversations during group meetings and make himself heard.

Great performance. He contributed information about databases and was creative during the planning meeting

Alix Feinsod

Alix Feinsod is a very energetic person, and has many ideas which are really good on our team. She also has a lot of courage to step and become our Project Manager, but I think that's a great position for her. Her ability to come up with all these ideas really helps us out on our high-level planning. She's also very good in making sure everyone else is being heard and no one feels left out. The only down-side

Alix is the one to bring the group back together if the conversations get to rambunctious or off topic.

Alix was the driving force of the planning meeting that the team needed to get done the work.

Alix should slow down to allow others to contribute, and think more about the big picture rather than minor pieces.

Great performance. She was very helpful and enthusiastic during the planning meeting and showed up with time.

Alix was always on time for the meetings. Alix took initiative and contributed great ideas.

Improve: When a person in the group is speaking Alix should listen first then wait until that person has finished speaking.
