

Working Prototype Known Problems Report

Ride Share App

#NoLife

December 3, 2015

- List of functions not working correctly:
 - Profile page can't be seen by other users.
 - We can't see who is in the map route.
 - Addresses sometimes get reported as wrong when correct. This is due to lag by Google's geocoding API. Try again after a short time and it should work.
 - Incorrect error message shows for blank entries when adding rides.
 - Inputting strings such as 'cats' for departure time, arrival time, number of seats in our search page and search return page breaks the system.
 - The error for when the arrival time is earlier than the departure time is no longer working.
